BEFORE THE PATENT TRIAL AND APPEAL BOARD

---

ORACLE CORPORATION and NETAPP INC.,  
Petitioner,

v.

CROSSROADS SYSTEMS, INC.,  
Patent Owner.

---

Case IPR2014-01209  
Patent 7,051,147 B2

---

Before NEIL T. POWELL, KRISTINA M. KALAN, J. JOHN LEE, and  
KEVIN W. CHERRY, *Administrative Patent Judges*.

KALAN, *Administrative Patent Judge*.

FINAL WRITTEN DECISION  
*35 U.S.C. § 318(a) and 37 C.F.R. § 42.73*

## I. INTRODUCTION

Oracle Corporation and NetApp Inc. (collectively, “Petitioner”)<sup>1</sup> filed a Petition (Paper 1, “Pet.”) to institute an *inter partes* review of claims 1–13 of U.S. Patent No. 7,051,147 B2 (Ex. 1001, “the ’147 patent”) pursuant to 35 U.S.C. §§ 311–319. Crossroads Systems, Inc. (“Patent Owner”) filed a Preliminary Response (Paper 11, “Prelim. Resp.”).

On January 30, 2015, we instituted trial as to claims 1, 2, 4, 5, 10, 11, and 13 of the ’147 patent. Paper 12 (“Dec.”). During trial, Patent Owner filed a Patent Owner Response (Paper 29, “PO Resp.”), which was accompanied by a Declaration from John Levy, Ph.D. (Ex. 2053). Petitioner filed a Reply to the Patent Owner Response. Paper 44 (“Reply”). An oral hearing was held on October 30, 2015. A transcript of the consolidated hearing has been entered into the record. Paper 76 (“Tr.”).

Petitioner filed a Motion to Exclude (Paper 58) and Reply in support of the Motion to Exclude (Paper 69). Patent Owner filed an opposition to Petitioner’s Motion to Exclude (Paper 63).

Patent Owner also filed a Motion to Exclude (Paper 60) and Reply in support of the Motion to Exclude (Paper 70). Petitioner filed an opposition to Patent Owner’s Motion to Exclude (Paper 65).

We have jurisdiction under 35 U.S.C. § 6. This Final Written Decision is issued pursuant to 35 U.S.C. § 318(a) and 37 C.F.R. § 42.73. We determine that Petitioner has shown by a preponderance of the evidence that claims 1, 2, 4, 5, 10, 11, and 13 of the ’147 patent are unpatentable.

---

<sup>1</sup> Huawei Technologies Co. Ltd. was a Petitioner in the original Petition. Pet. 1. On October 8, 2015, we granted a joint motion to terminate Petitioner Huawei Technologies Co. Ltd. Paper 68.

## II. BACKGROUND

### A. *Related Matters*

The parties indicate that the '147 patent is asserted in co-pending matters captioned *Crossroads Systems, Inc. v. Oracle Corp.*, Case No. 1-13-cv-00895-SS (W.D. Tex.) and *Crossroads Systems, Inc. v. NetApp, Inc.*, Case No. 1-14-cv-00149-SS (W.D. Tex.). Pet. 2–3; Paper 9, 3. The '147 Patent is also involved in IPR2014-01207 and IPR2014-01544.

### B. *The '147 Patent (Ex. 1001)*

The '147 patent, titled “Storage Router and Method for Providing Virtual Local Storage,” issued on May 23, 2006. The '147 patent relates to a storage router and storage network where devices (e.g., workstations) connected to a Fibre Channel (“FC”) transport medium are provided access to storage devices connected to a second FC transport medium. Ex. 1001, Abstract. The storage router interfaces with both FC media, mapping workstations on the first FC transport medium, for example, to the storage devices on the second FC transport medium. *Id.* The storage router of the '147 patent allows access from the workstations to the storage devices using “native low level, block protocol.” *Id.* One advantage of using such native low level block protocols is greater access speed when compared to network protocols that must first be translated to low level requests, and vice versa, which reduces access speed. *Id.* at 1:58–67.

### C. *Illustrative Claim*

Claim 1 of the '147 patent is reproduced below:

1. A storage router for providing virtual local storage on remote storage devices to a device, comprising:  
a buffer providing memory work space for the storage router;

a first Fibre Channel controller operable to connect to and interface with a first Fibre Channel transport medium;  
a second Fibre Channel controller operable to connect to and interface with a second Fibre Channel transport medium; and  
a supervisor unit coupled to the first and second Fibre Channel controllers and the buffer, the supervisor unit operable:

to maintain a configuration for remote storage devices connected to the second Fibre Channel transport medium that maps between the device and the remote storage devices and that implements access controls for storage space on the remote storage devices; and

to process data in the buffer to interface between the first Fibre Channel controller and the second Fibre Channel controller to allow access from Fibre Channel initiator devices to the remote storage devices using native low level, block protocol in accordance with the configuration.

Ex. 1001, 9:24–47.

*D. Prior Art Supporting Instituted Unpatentability Grounds*

1. Judith A. Smith & Meryem Primmer, *Tachyon: A Gigabit Fibre Channel Protocol Chip*, HEWLETT-PACKARD J. 1, 1–17 (1996) (“Smith”) (Ex. 1005);
2. U.S. Patent No. 6,219,771 B1, issued Apr. 17, 2001 (“Kikuchi”) (Ex. 1006);
3. U.S. Patent No. 6,073,209, issued June 6, 2000 (“Bergsten”) (Ex. 1007); and
4. JP Patent Application Pub. No. Hei 5[1993]-181609, published July 23, 1993 (“Hirai”) (Ex. 1008).

Petitioner also relies on the Declaration of Professor Jeffrey S. Chase, Ph.D. (Ex. 1010, “Chase Declaration”).

*E. Instituted Unpatentability Grounds*

We instituted an *inter partes* review of claims 1, 2, 4, 5, 10, 11, and 13 of the ’147 patent on the following grounds:

<b>References</b>	<b>Basis</b>	<b>Claim(s) Instituted</b>
Kikuchi and Bergsten	§ 103	1, 2, 4, 10, 11, and 13
Kikuchi, Bergsten, and Smith	§ 103	5
Bergsten and Hirai	§ 103	1, 2, 4, 10, 11, and 13
Bergsten, Hirai, and Smith	§ 103	5

### III. ANALYSIS

For the challenged claims, Petitioner must prove unpatentability by a preponderance of the evidence. 35 U.S.C. § 316(e).

#### *A. Claim Interpretation*

The Board interprets claim terms in an unexpired patent using the “broadest reasonable construction in light of the specification of the patent in which [they] appear[.]” 37 C.F.R. § 42.100(b); *see* Office Patent Trial Practice Guide, 77 Fed. Reg. 48,756, 48,766 (Aug. 14, 2012). Under the broadest reasonable interpretation standard, claim terms are given their ordinary and customary meaning in view of the specification, as would be understood by one of ordinary skill in the art at the time of the invention. *In re Translogic Tech., Inc.*, 504 F.3d 1249, 1257 (Fed. Cir. 2007). Only those terms which are in controversy need be construed, and only to the extent necessary to resolve the controversy. *Vivid Techs., Inc. v. Am. Sci. & Eng’g, Inc.*, 200 F.3d 795, 803 (Fed. Cir. 1999).

In our Decision to Institute, we determined that no claim terms required construction. Based on our review of the complete record, we maintain our determination that no constructions are necessary.

*B. Asserted Ground Based on Kikuchi and Bergsten*

Petitioner challenges claims 1–4 and 6–13 as obvious under 35 U.S.C. § 103 over Kikuchi and Bergsten. Pet. 29–43. We instituted *inter partes* review of claims 1, 2, 4, 10, 11, and 13 on this ground. Dec. 8–10.

*1. Kikuchi*

Kikuchi is titled “Data Storage Apparatus with Improved Security Process and Partition Allocation Functions,” and discloses an apparatus that enables access authorization to be assigned solely to specific host devices. Ex. 1006, Abstract. In one embodiment, Kikuchi discloses address offset information conversion unit 121 and actual partition address conversion unit 122, as shown in Figure 5:

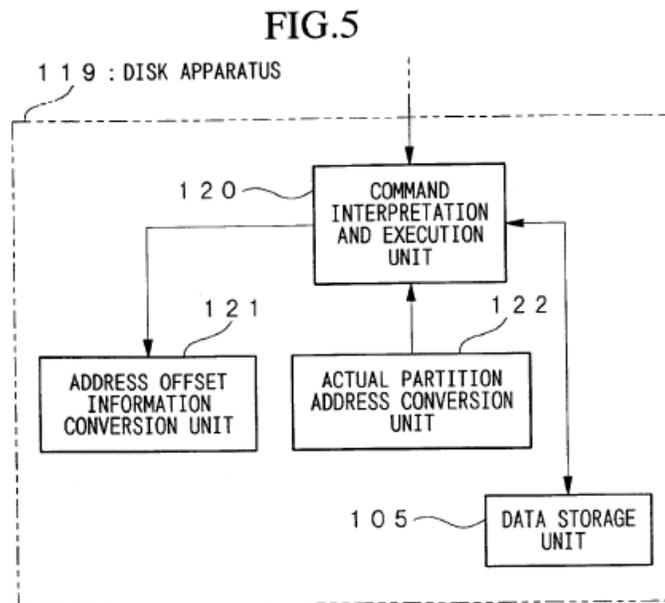

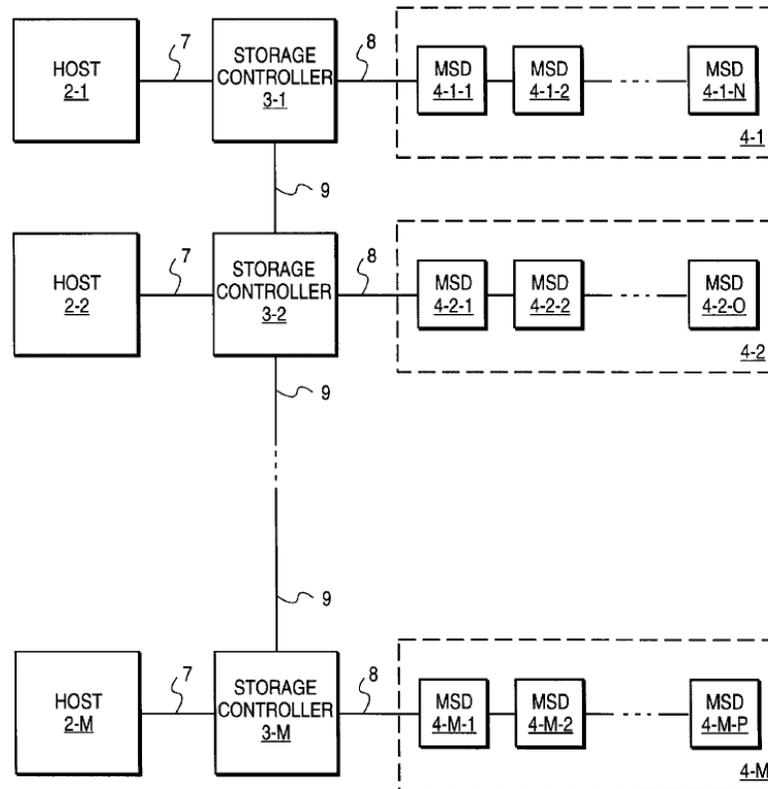

Figure 5 is a diagram showing the configuration of an embodiment of the claimed invention of Kikuchi, in which offset information indicating a disk partition corresponding to each host device has been stored in advance in the address offset information conversion unit 121, and the host address input from command interpretation and execution unit 120 is converted to this

offset information. *Id.* at 3:48–49, 7:55–63. In this embodiment, actual partition address conversion unit 122 combines the disk partition address output from command interpretation and execution unit 120 with the offset information output from address offset information conversion unit 121 to generate an actual disk partition address. *Id.* at 7:64–8:3.

## 2. *Bergsten*

*Bergsten* is titled “Data Storage Controller Providing Multiple Hosts with Access to Multiple Storage Subsystems,” and describes a storage controller that allows multiple host computer systems at different locations to access any of multiple copies of stored data. Ex. 1007, 3:1–4. The storage controller emulates a local storage array for the host computer system that it services and emulates a host computer system for the local storage array that it accesses. *Id.* at 3:14–17. The host computer systems access stored data using virtual device addresses, which are mapped to real device addresses by the storage controller. *Id.* at 3:17–19. Figure 1 of *Bergsten* is reproduced below.

**FIG. 1**

Figure 1 of Bergsten is a block diagram illustrating a computing system in which a number of Bergsten's storage controllers provide a number of host computer systems with access to a number of storage arrays. *Id.* at 3:20–23. Figure 1 shows a computing system with M storage controllers, 3-1 through 3-M; M host computers, 2-1 through 2-M, which are coupled to storage controllers 3-1 through 3-M, respectively; and M storage arrays 4-1 through 4-M, which are coupled to storage controllers 3-1 through 3-M respectively. *Id.* at 3:23–28. Each of the storage arrays includes a number of mass storage devices (“MSDs”). *Id.* at 3:28–34. Storage controllers 3-1 through 3-M function cooperatively to provide any of host computer systems 2-1 through 2-M with access to any of storage arrays 4-2

through 4-M. *Id.* at 4:7–9. Storage controller 3-1 is coupled directly to host computer system 2-1 using data communication path 7 and to local data storage array 4-1 via another communication path 8. *Id.* at 4:13–17. Data communication paths 7 and 8 may conform to a variety of protocols, including SCSI, serial SCSI, Fiber Channel, or ESCON. *Id.* at 4:19–28.

A local host computer accesses data by transmitting a (virtual) host address to its local storage controller. *Id.* at 6:10–11. The host address is then mapped to a real address representing a location on one or more physical MSDs. *Id.* at 6:11–14. The mapping is completely transparent to all of the host computers. *Id.* at 6:14–16. A single host address may map to multiple physical addresses, which may be distributed among multiple MSDs, and such MSDs may further be located in different storage arrays. *Id.* at 6:16–21. The storage controller maintains and uses a tree structure to map the host interface ID and block number to a logical device. *Id.* at 9:21–24; Fig. 8.

### 3. *Kikuchi as Prior Art*

Patent Owner argues that Kikuchi, which was filed on August 18, 1997, is not prior art. PO Resp. 26. Patent Owner argues that the invention of the '147 patent was conceived as early as March 22, 1997, and that the '147 patent claims priority to U.S. Patent No. 5,941,972, which was filed on December 31, 1997.<sup>2</sup> *Id.* More particularly, Patent Owner alleges that the

---

<sup>2</sup> The '147 patent sets forth its parentage as follows: “Continuation of application No. 10/081,110, filed on Feb. 22, 2002, now Pat. No. 6,789,152, which is a continuation of application No. 09/354,682, filed on Jul. 15, 1999, now Pat. No. 6,421,753, which is a continuation of application No. 09/001,799, filed on Dec. 31, 1997, now Pat. No. 5,941,972.” Ex. 1001 at [63].

invention of the '972 patent, representing the earliest filing in the '147 patent's chain of title, was conceived as early as March 1997. *Id.* at 21. According to Patent Owner: "Only two dates are important for the prior invention analysis. Crossroads must have a complete conception just before Kikuchi's filing date (Aug. 17, 1997) and diligence in reduction to practice (here, constructive reduction to practice on Dec. 31, 1997) ('the critical period')." *Id.* at 30.

During the period in which reasonable diligence must be shown, there must be continuous exercise of reasonable diligence. *In re McIntosh*, 230 F.2d 615, 619 (CCPA 1956); *see also Burns v. Curtis*, 172 F.2d 588, 591 (CCPA 1949) (referring to "reasonably continuous activity"). A party alleging diligence must account for the entire critical period. *Griffith v. Kanamuru*, 816 F.2d 624, 626 (Fed. Cir. 1987); *Gould v. Schawlow*, 363 F.2d 908, 919 (CCPA 1966).

Even a short period of unexplained inactivity is sufficient to defeat a claim of diligence. *Morway v. Bondi*, 203 F.2d 742, 749 (CCPA 1953); *Ireland v. Smith*, 97 F.2d 95, 99–100 (CCPA 1938). In *In re Mulder*, 716 F.2d 1542, 1542–46 (Fed. Cir. 1983), the Federal Circuit affirmed a determination of lack of reasonable diligence, where the evidence of record was lacking for a two-day critical period. Likewise, in *Rieser v. Williams*, 255 F.2d 419, 424 (CCPA 1958), there was insufficient diligence where no activity was shown during the first 13 days of the critical period.

To support its conception date, Patent Owner relies, *inter alia*, on an abstract and drawing sent from the inventor to outside counsel on May 28, 1997, and a draft patent application returned by outside counsel on July 11, 1997, as evidence. PO Resp. 28 (citing Exs. 2300–2303). To support its

allegations of reduction to practice, Patent Owner argues that the “precursor to the invention claimed in the ’972 patent was the ‘Verrazano’ project.” *Id.* at 29. According to Patent Owner, “Verrazano was a bridge for linking FC and SCSI devices and contained all elements of the ’972 invention except for access controls and virtual local storage.” *Id.* During the critical period, according to Patent Owner, all of its employees were working to create a viable Verrazano product. *Id.* at 30. “Verrazano would eventually become Crossroads’ CP4100 product,” according to Patent Owner, and because “Verrazano was the basic hardware platform that would be used to support access controls, its development was required before that feature could be added and the entire invention could actually be reduced to practice.” *Id.* at 30–31 (citing *Thompson v. Dunn*, 166 F.2d 443, 447 (CCPA 1948); *Keizer v. Bradley*, 270 F.2d 396, 398–99 (CCPA 1959)). Patent Owner also points to “revising multiple draft patent applications prior to constructive reduction to practice on December 31, 1997” as evidence of diligence. *Id.* at 32.

Petitioner’s arguments address two time periods: the “first time period” from August 18, 1997, to November 25, 1997, during which inventors were engaged in constructive reduction to practice of the Verrazano bridge product, and the “second time period” from November 25, 1997, to December 31, 1997, during which Petitioner was allegedly revising the patent application. Reply 2–3. Petitioner does not provide arguments specifically directed to Patent Owner’s allegations regarding conception.

Regarding the “first time period,” Petitioner argues that Patent Owner’s attempt to antedate Kikuchi fails because “about four months of the diligence period was dedicated *only* to developing a product that, Patent Owner also admits, was outside the scope of the claims.” *Id.* at 1. During

this “first time period” in which inventors were working on the Verrazano bridge product, Petitioner argues that Patent Owner “made a conscious decision to prioritize development of the Verrazano bridge and delay development of the claimed subject matter.” *Id.* at 4. Petitioner disagrees with Patent Owner’s contention that the completion of the Verrazano product was necessary for commencement of work on the access controls. *Id.* Instead, Petitioner argues, “Patent Owner opted to omit the access controls from the Verrazano product to accelerate commercial introduction of that product.” *Id.* at 5.

Regarding the “second time period” from November 25, 1997, to December 31, 1997, Petitioner argues that, although a draft of the patent application from counsel was received by Patent Owner in July 1997, subsequent edits were “so minimal that they could not have accounted for the five week delay.” *Id.* at 7 (citing Ex. 1228). Petitioner summarizes: “A single patent application review meeting and the transmission of a draft patent application with minimal revisions cannot have required more than a couple days of effort. Patent Owner offers no other evidence of diligence during the five week period.” *Id.* at 7–8.

We do not agree with Patent Owner’s assertions that developing the Verrazano product was a necessary precursor to developing access controls. Petitioner’s evidence, including deposition testimony of diligence declarant John Middleton, indicates that Patent Owner could have tested access controls during the “first time period,” but decided not to. Reply 4 (citing Ex. 1220, 54, 58–59, 63–65). Patent Owner relies on Mr. Middleton’s declaration statement that “until the Verrazano bridge could be completed, Crossroads had no working device which could implement access controls.”

Ex. 2305, 3. However, during his deposition, Mr. Middleton stated that Crossroads was interested in “becoming profitable as soon as possible” and agreed that the exclusion of access controls from the Verrazano bridge possibly had to do with reasons relating to interest in early revenue generation and delay of the commercial launch. Ex. 1220, 71:4, 71:10–72:22. Mr. Middleton also stated that, during testing, the functionality of the Verrazano hardware prototypes could have included access control functionality. *Id.* at 63:21–64:4. Petitioner’s evidence, in total, indicates Patent Owner made a business decision to develop and launch the Verrazano product, without access controls, because development of access controls would have lengthened the time to market for the Verrazano product. Reply 5–6 (citing Ex. 1220, 70:16–72:22). Thus, Patent Owner cannot rely on *Thompson v. Dunn* to excuse its inactivity in developing access controls. As discussed above, even a short period of unexplained inactivity is sufficient to defeat a claim of diligence, and Patent Owner’s four-month gap of activity exceeds the short periods found to prevent an earlier priority date by the courts. *Morway*, 203 F.2d at 749. Patent Owner’s additional evidence of reasonable diligence during the “second time period” also is insufficient. The minor changes to the patent application during this time period do not represent reasonably continuous activity. Because Patent Owner had a draft application since July 1997, it is unclear if those changes were even made during this “second time period,” or if they were made at some other point between drafting and filing the application. Thus, based on the totality of the evidence before us, we are persuaded that Kikuchi is prior art.

4. *Arguments*

Petitioner asserts, in a section titled “The Combined System of *Kikuchi* and *Bergsten*,” that the references, in combination, disclose the claimed subject matter. Pet. 32–35. Petitioner argues that “[i]n the combined system of *Kikuchi* and *Bergsten*, multi-protocol intercommunication capabilities of the command and interpretation unit described in *Kikuchi* are enhanced by incorporating *Bergsten*’s emulation drivers 21 and physical drivers 22, which are detailed in *Bergsten* with a greater degree of specificity.” *Id.* at 32. Petitioner emphasizes that “[t]o the extent that *Kikuchi* fails to explicitly detail every nuance of FCP-based encapsulation and de-encapsulation, the details of *Bergsten*’s emulation drivers 21 and physical drivers 22 more than sufficiently provide specific details.” *Id.* at 32–33. Based on the full record after trial, we find that the combination of *Kikuchi* and *Bergsten* teaches all of the limitations of the instituted claims. *Id.* at 35–43 (explaining how each limitation is taught by the asserted prior art).

Patent Owner argues that *Bergsten* does not teach the claimed access controls, and *Kikuchi* does not teach the claimed map or access controls. PO Resp. 32. Instead, Patent Owner argues, *Kikuchi*’s simple address offset is designed to create different “partitions of a physical storage device,” and thus does not provide the claimed map or access controls. *Id.* at 33–34. Patent Owner relies on the testimony of Dr. Levy to support its assertions that the “simple address offset mechanism of *Kikuchi* is designed to create different ‘partitions’ of a physical storage device.” *Id.* at 34 (citing Ex. 2053 ¶¶ 149–151). Patent Owner also argues that access controls are not present

in the asserted combination, because Bergsten's emulation driver prevents host identity from reaching any map. *Id.* at 47–48.

Petitioner replies that the combination of Kikuchi and Bergsten does in fact restrict access to specific host devices, in that the “correlation chart and address conversion units described in *Kikuchi* are modified to include the virtual mapping functionality of *Bergsten*'s storage controller.” Reply 9. Regarding Dr. Levy's testimony that Kikuchi does not “really” talk about disk partitions, Petitioner argues that Dr. Levy fails to understand properly the operation of Kikuchi, and furthermore attacks Kikuchi individually. *Id.* at 9–10 (citing *In re Keller*, 642 F.2d 413, 426 (CCPA 1981)). Petitioner supports its argument by citing to portions of Kikuchi stating that Kikuchi's apparatus “enables access authorization to be assigned solely to specific host devices.” *Id.* at 10–11 (citing Ex. 1006, Abstract, 1:65–2:6, 8:40–46). Petitioner also states that Kikuchi, as a form of access control, evaluates the host address to determine whether a host has any rights to access the storage device. Pet. 29–30 (citing Ex. 1006, 4:35–44); Tr. 20:22–25. According to Petitioner, there is no express support for Patent Owner's contention that the Kikuchi host ID would be stripped from the combination. Tr. 23:11–15. Petitioner argues that, based on the asserted combination set forth in the Petition, Kikuchi has the ability to extract the host device ID and communicate it on, even in an FC embodiment such as that in Bergsten. Pet. 29; Tr. 23:17–24:2. As disclosed in Bergsten and discussed by Dr. Chase, Bergsten's host ID identifies the particular host, and is received by the storage controller in Bergsten. Ex. 1007, 9:8–20, Fig. 7; Tr. 63:9–17; Ex. 1010 ¶¶ 299, 313.

We agree with Petitioner that Kikuchi's disclosure of access authorization assigned to specific host devices meets the "access control" limitation of the claims. In the sections of Kikuchi cited by Petitioner, Kikuchi expressly states that host addresses that match those in an address registration are given access authorization, and certain hosts receive access to certain portions of the disk based on their access authorization, which demonstrates the presence of "access control." Ex. 1006, Abstract, 1:65–2:6, 4:35–44, 8:37–46. We agree that the express disclosures of Kikuchi should be given substantial weight in our consideration of whether Kikuchi discloses access controls. Additionally, based on the evidence presented, including the disclosures of Bergsten itself and the testimony of Dr. Chase, we are not persuaded that Bergsten prevents host identity from reaching any map. Petitioner's citations to Bergsten and to Kikuchi support the position that the host ID in each system, or the combined system, is used for mapping purposes rather than being stripped or discarded.

Patent Owner also argues that the asserted combination impermissibly enhances both Kikuchi and Bergsten by ignoring their purposes and modifying their principles of operation. PO Resp. 36. Specifically, Patent Owner argues that one of ordinary skill in the art would not modify the references as proposed by Petitioner, as the combination is highly complex and destroys the intended purposes of both references by modifying their principles of operation. *Id.* at 36–42.

Petitioner responds by arguing that the proposed combination does not change the principles of operation, stating that both parties' experts agree that "making modifications of the type described by Patent Owner would have been rudimentary and well within the skill of an ordinary artisan in this

field,” such as changing between a mapping tree (as in Bergsten) and a mapping chart (as in Kikuchi). Reply 12 (citing Ex. 1218, 103; Ex. 1010 ¶ 145, Ex. 2054, 200, 214).

We credit the testimony of Dr. Chase that one of ordinary skill in the art would have been motivated and able to combine Kikuchi and Bergsten in the manner proposed by Petitioner. Ex. 1010 ¶¶ 142–147; Ex. 2054, 180–213. Patent Owner’s arguments to the contrary address the purported complexity of the combination, but do not establish that a person of ordinary skill would not have had a reasonable expectation of success. Obviousness does not require absolute predictability. *In re Kronig*, 539 F.2d 1300, 1304 (CCPA 1976). Both experts agree that the modifications were within the level of ordinary skill in this field (Ex. 1010 ¶ 145; Ex. 1218, 103:16–21). Dr. Chase’s Declaration states that tables and trees are interchangeable data lookup constructs for address translations, and that the “tree mapping” of Bergsten may be collapsed into a simple mapping table construct such as that of Kikuchi in a single-controller implementation; his deposition testimony provides greater detail in response to Patent Owner’s questions on how the collapsing would occur in different circumstances. Ex. 1010 ¶ 145; 2054, 180–219. Thus, we are persuaded by Petitioner’s testimony and evidence that the combination of Kikuchi and Bergsten was within the skill level of an ordinarily skilled artisan, and would not change the principles of operation of the respective references.

Finally, Patent Owner argues that Petitioner has not provided a motivation to combine Kikuchi and Bergsten. PO Resp. 50–52. According to Petitioner, one of ordinary skill in the art would have been motivated to combine Kikuchi and Bergsten to “improve the *Kikuchi* system with the

advantage of virtualized, networked storage,” to “increase both the number of storage devices accessible to hosts and the storage address range available,” and to “benefit from increased restructuring capabilities.” Pet. 34–35 (citing Ex. 1010 ¶¶ 142–147); Reply 13 (citing Ex. 1010 ¶ 146). Patent Owner challenges each of these statements, and the supporting testimony, as lacking evidence supporting how Bergsten would provide the alleged benefits or explaining why one of ordinary skill in the art would be motivated to combine the references as proposed by Petitioner. PO Resp. 51–52.

Here, too, we credit the testimony of Dr. Chase that one of ordinary skill in the art would have been motivated to combine Kikuchi and Bergsten in the manner proposed by Petitioner. Ex. 1010 ¶¶ 142–147. Bergsten itself indicates that it would be “desirable” for a storage controller to not be “dependent on any particular hardware or software configuration of any host computer or mass storage device which it services.” Ex. 1007, 1:48–51. The numerous reasons articulated by Petitioner for the combination of Kikuchi with Bergsten, resulting in an enhanced system with advantages including virtualized storage, increased capacity and increased flexibility, are detailed by Petitioner and supported by testimony. *KSR Int’l Co. v. Teleflex Inc.*, 550 U.S. 398, 421–22 (2007). Patent Owner’s arguments to the contrary are unavailing.

As discussed below, we are not persuaded that Patent Owner has established secondary considerations of non-obviousness. Accordingly, we find that Petitioner has demonstrated by a preponderance of the evidence that claims 1, 2, 4, 10, 11, and 13 are obvious over Kikuchi and Bergsten.

*D. Asserted Ground Based on Kikuchi, Bergsten and Smith*

Petitioner challenges claim 5, which depends from claim 1, as unpatentable over Kikuchi, Bergsten and Smith. Pet. 43–44. Smith discusses a Tachyon chip, an FC interface controller that “enables a seamless interface to the physical FC-0 layer and low-cost [FC] attachments for hosts, systems, and peripherals on both industry-standard and proprietary buses.” Ex. 1005, 1. Petitioner argues that “one of ordinary skill would understand that the emulation and physical drivers of *Bergsten* are designed to incorporate the functionality of the Tachyon chip of *Smith*.” Pet. 43 (citing Ex. 1010 ¶¶ 239–240). Specifically, Petitioner argues that the combined system, and in particular, Smith, describes a Fibre Channel protocol unit, a FIFO queue coupled to the FC protocol unit, and inbound and outbound sequence managers that perform DMA transfers of inbound data and outbound data. *Id.* (citing Ex. 1005, pp. 5, 7, 9, Fig. 4). Patent Owner argues that the challenge to claim 5 must fail for the same reasons as discussed for claim 1, because Petitioner does not allege that Smith changes the functionality of the Bergsten/Kikuchi combination, and challenges Petitioner’s rationale for the combination. PO Resp. 52. We are persuaded by the evidence that one of ordinary skill in the art would have incorporated the functionality of the Tachyon chip into the system of Kikuchi and Bergsten. As discussed below, we are not persuaded that Patent Owner has established secondary considerations of non-obviousness. On this record, Petitioner has demonstrated by a preponderance of the evidence that claim 5 is unpatentable over the combination of Kikuchi, Bergsten, and Smith.

*E. Asserted Grounds Based on Bergsten and Hirai*

Petitioner challenges claims 1–4 and 6–13 as unpatentable over Bergsten and Hirai. Pet. 44–57. We instituted *inter partes* review on claims 1, 2, 4, 10, 11, and 13 on this ground. Dec. 11–13.

*1. Hirai*

Hirai is a Japanese published patent application titled “Personal Computer System.” Ex. 1008, (54). Hirai describes a personal computer system that allows the sharing of multiple magnetic disk devices by multiple personal computers. *Id.* at Abstract. The multiple disks are considered as one virtual magnetic disk device with a partition control table that manages and specifies the access right of the personal computers connected to the sharing device for each partition of the memory region of the virtual magnetic disk device. *Id.* ¶¶ 5, 11, 12. The access right to a partition includes R (read), W (write), C (create), D (delete), and X (execute). *Id.* ¶ 12. Figure 2 of Hirai is reproduced below.

Partition	Computer name	Access right
Partition 1	Personal computer 1	RWCX
	Personal computer 2	RWCX
	Personal computer 3	RWCX
Partition 2	Personal computer 1	RW
	Personal computer 3	R
Partition 3	Personal computer 1	R
	Personal computer 2	R
Partition n	.	.
	.	.
	.	.
	.	.

(R: Readable, W: Writable, C: Creatable, X: Executable)

Figure 2

Figure 2 shows an example of a partition control table. For example, Personal computer 1 can read, write create, and execute with a partition 1, read and write with a partition 2, and read with a partition 3. *Id.* ¶ 13. The system can prevent illegal access from a personal computer that is not authorized. *Id.*

## 2. Analysis

Petitioner asserts, in a section titled “The Combined System of *Bergsten* and *Hirai*,” that the references, in combination, disclose the claimed subject matter. Pet. 46–49. Petitioner argues that “[i]n the combined system [of *Bergsten* and *Hirai*], *Hirai*’s access controls are incorporated into *Bergsten*’s storage controllers.” Pet. 47. Petitioner contends that “[t]o the extent that Patent Owner attempts to argue that *Bergsten* may lack explicit and nuanced detail regarding the implementation of access controls and the ramifications of write-protecting data . . . the access control map described in *Hirai* is detailed with a greater degree of particularity.” *Id.* at 47–48. Petitioner explains that in the combined system, the storage controller “maps the identification of the host device and the host address within the command to a logical storage location and verifies that the access type (which is requested within the storage command) matches the access controls specified for the host device for particular logical storage location.” *Id.* at 48 (citing Ex. 1010 ¶¶ 248–50). Petitioner reasons that “[a]n artisan skilled in network storage during the relevant timeframe would combine the *Bergsten* and *Hirai* teachings in the above-described manner in order to provide additional levels of granularity to the access controls of the *Bergsten* system based on the mapping-based access controls of *Hirai*.” *Id.* at 48–49.

Patent Owner disputes whether Bergsten or Hirai, either alone or in combination, teach or suggest certain limitations of claim 1, including that the supervisor unit be operable to: “to allow access . . . using [native low level, block protocols].” PO Resp. 10–26. Patent Owner raises additional arguments regarding the sufficiency of Petitioner’s obviousness analysis based on reasonable expectation of success and Petitioner’s asserted motivation to combine. *See id.* at 23–26.

We note that the claims require use of native low-level block protocol to effect communication between the controllers. Ex. 1001, 9:23–14:16. The specification emphasizes the importance of native low-level block protocols (“NLLBP”): “storage access involves native low level, block protocols and does not involve the overhead of high level protocols and file systems required by network servers.” *Id.* at 5:14–16. In particular, Patent Owner submits, and Dr. Levy testifies, that Hirai does not “allow access . . . using NLLBP” because Hirai uses only high level file system access rights. PO Resp. 14 (citing Ex. 2053 ¶¶ 43, 59, 87, 89–91, 95–96). Patent Owner contends that Petitioner must impermissibly pick and choose from Hirai’s teachings regarding access rights, ignoring the teaching of Hirai as a whole, to combine it with Bergsten. *Id.* at 16. Patent Owner argues that the combination of Hirai’s file system access controls with the open access system of Bergsten results in “allowing access . . .” in the same manner as the prior art “network servers,” which was the problem identified by the inventors of the ’147 patent. *Id.* at 13.

We are persuaded by Patent Owner’s arguments that Petitioner and its Declarant, Dr. Chase, fail to account for the prior art as a whole and improperly pick and choose from the references in their reasoning to support

their contention that the proposed combination of Bergsten and Hirai renders the claims obvious. To begin with, the Petition appears to implicitly assume, without any explanation, that Hirai's access controls are NLLBP controls, but never provides any explanation for this assumption. Pet. 44–49. Even in its Reply, Petitioner does not attempt to show that Hirai is directed to NLLBP access controls, but instead only argues that Hirai does not disclose high level controls. Reply 16. The only evidence Petitioner provides to support its contentions is the testimony of Dr. Chase. We are not persuaded by Petitioner's contention and Dr. Chase's testimony that Hirai is directed to block-level access controls. *See id.* at 17; Ex. 1010 ¶¶ 247–251.

As Patent Owner explains, looking at all of the access rights described in Hirai, the evidence suggests that these are high-level access controls rather than low level block permissions. Ex. 2053 ¶¶ 88–99. We find that the evidence supports Patent Owner's contentions that all of the permissions described in Hirai are consistent with file system permissions, not block level permissions. *See id.* ¶¶ 89–91; Ex. 2048, 28–29 (describing permissions used in Network File System); Ex. 2057, 15 (discussing UNIX file permissions); Ex. 2055, 308:25–310:7 (explaining that read, write, create, and execute are standard file system permissions). We also agree with Patent Owner that, based on the record currently before us, a person of ordinary skill would not understand Hirai to disclose block level access controls. Ex. 2053 ¶ 92. Such a reading is most consistent with all of the disclosure of Hirai and, unlike Dr. Chase's reading does not ignore or discount some of the permissions. *Id.* ¶ 98 (discussing Dr. Chase's cross-examination testimony regarding the “create” permission).

Petitioner raises two principal arguments in the Reply. Reply 16–19. First, Petitioner argues that Hirai does not teach that the access controls are at the network file system level. *Id.* at 16. Petitioner contends that the “create” and “delete” commands ignore the fact that an administrator could use the “create” and “delete” commands to control the formation and removal of partitions. *Id.* (citing Ex. 1008 ¶¶ 12–13). However, the portions of Hirai cited to support these statements merely establish that the disk is divided into partitions. Ex. 1008 ¶¶ 12–13. Petitioner cites to no evidence that would establish that the administrator in Hirai would create or delete partitions after they are established. Indeed, it is directly inconsistent with Dr. Chase’s testimony under cross-examination that “since the partition already exists, create permission can’t refer to a permission to create the partition. So it must mean something else.” Ex. 2055, 322:22–323:4. Petitioner contends that “‘execute’ would be nonsensical in a remotely located storage NFS-level solution” and that “*Hirai’s* sharing device 3 would have no way of enforcing an execute permission because the remote devices would of course execute the files locally, without the intervention or cooperation of the sharing device 3.” Reply 16. Even if it were appropriate to ignore portions of the references, there is no evidence cited to support Petitioner’s allegation that “execute” is nonsensical. *See In re Wesslau*, 353 F.2d 238, 241 (CCPA 1965) (“It is impermissible within the framework of section 103 to pick and choose from any one reference only so much of it as will support a given position to the exclusion of other parts necessary to the full appreciation of what such reference fairly suggests to one of ordinary skill in the art.”). Thus, we do not find it persuasive. Moreover, Petitioner fails to explain how this establishes that Hirai’s access controls must,

therefore, be block level. Thus, we do not find this argument overcomes Patent Owner's significant evidence to the contrary.

Second, Petitioner argues that Patent Owner's argument is irrelevant because it relies on the combination of Bergsten and Hirai to teach "access controls," and that Patent Owner's arguments are only an attack on the references individually, which is insufficient. Pet. Reply 16–17 (citing *Keller*, 643 F.2d at 426; *In re Merck & Co.*, 800 F.2d 1091, 1097 (Fed. Cir. 1986)). Petitioner argues that "[t]he petition explains that, to the extent *Bergsten* fails to describe the privileges associated with write-protecting data, *Hirai*'s access controls may be incorporated into *Bergsten*'s storage controller (which operates at the block level, not the file level)." *Id.* (citing Pet. 47–48). The Petition notes that Bergsten allows write-protection of certain blocks, but then vaguely asserts that "[t]o the extent that the Patent Owner attempts to argue that *Bergsten* may lack explicit and nuanced detail regarding the implementation of access controls and the ramifications of write-protecting data upon a single storage controller of a daisy-chained storage controller network, the access control map described in *Hirai* is detailed with a greater degree of particularity." Pet. 47–48. We are not persuaded that this presents the combination that Petitioner now argues, in which the access controls are obtained from Bergsten rather than Hirai, in sufficient detail. Indeed, that is not how we recognized the combination at institution. *See* Dec. 12. Even assuming that this new variation on the combination was presented, we do not find this argument persuasive because, even assuming that Petitioner is relying on Bergsten and Hirai to teach this element, the question of whether Hirai discloses high level or low level protocols is not irrelevant—it is relevant to assessing the adequacy of

the rationale for combining and modifying Bergsten and Hirai in the manner Petitioner proposed.

Dr. Chase testifies in his Declaration that “[i]n the combined system [of Bergsten and Hirai], the partition control table of Hirai would be merged with the map of Bergsten to implement access controls to particular data sections. The access controls would be based upon logical addressing.” Ex. 1010 ¶ 250. Dr. Chase also testifies that “[t]he effort to merge the access rights allocations of Hirai into the mapping tree (or table) of Bergsten would be a straightforward exercise for one of skill in the art at the time.” *Id.* ¶ 251. However, on cross examination, when asked about the “create” permissions that undeniably do not apply at the block level, Dr. Chase testified that “this is immaterial to me because I understand them to be an illustration of how this table might be used to represent various access rights and certainly read and write access are applicable in the scenario that we’re concerned with and in the combination that we’ve used Hirai for.” Ex. 2055, 325:23–326:13. Dr. Chase continued that “as I said, the interpretation of create permission is immaterial to me because read and write permission are clearly applicable in the combination.” *Id.* at 327:4–7. Dr. Chase testified similarly with respect to the “execute” permission. *Id.* at 327:24–328:25.

This type of reasoning—where relevant parts of the reference are disregarded for the proposed combination without sufficient explanation of why a person of ordinary skill would do so—is precisely the type of hindsight reasoning that must be rejected. “Care must be taken to avoid hindsight reconstruction by using ‘the patent in suit as a guide through the maze of prior art references, combining the right references in the right way

so as to achieve the result of the claims in suit.” *Grain Processing Corp. v. Am. Maize-Prods. Co.*, 840 F.2d 902, 907 (Fed. Cir. 1988) (quoting *Orthopedic Equip. Co. v. United States*, 702 F.2d 1005, 1012 (Fed. Cir. 1983)). We have been asked without sufficient justification to carve out and perhaps modify the access controls disclosed in Hirai and combine them with Bergsten to hold that the addition of a certain type of access controls to Bergsten would have been obvious. But “[t]his type of piecemeal analysis is precisely the kind of hindsight that the Board must not engage in.” *In re NTP, Inc.*, 654 F.3d 1279, 1299 (Fed. Cir. 2011). Petitioner has not explained why a person of ordinary skill, without the claims in front of them, would have been motivated to take the access control table of Hirai and merge it with the alleged map of Bergsten in the manner that they have proposed. The only thing that Petitioner suggests is that a person of ordinary skill could have done it, but that is not the test of obviousness. *See Belden, Inc. v. Berk-Tek LLC*, 805 F.3d 1064, 1073 (Fed. Cir. 2015) (“Obviousness concerns whether a skilled artisan not only *could have made but would have been motivated to make* the combinations or modifications of prior art to arrive at the claimed invention.”).

Petitioner’s analysis of claims 1, 2, 4, 10, 11, and 13 all rely on the same principles. Accordingly, we find that Petitioner has failed to show by a preponderance of the evidence that claims 1, 2, 4, 10, 11, and 13 are obvious over the combination of Bergsten and Hirai.

*F. Asserted Ground Based on Bergsten, Hirai, and Smith*

Petitioner challenges claim 5 as unpatentable over Bergsten, Hirai, and Smith. Pet. 57–58. Petitioner argues that “[o]ne of ordinary skill would understand that the emulation and physical drivers of *Bergsten* are designed

to incorporate the functionality of the Tachyon chip of *Smith*.” Pet. 57. Specifically, Petitioner argues that the combined system, and in particular, *Smith*, describes a Fibre Channel protocol unit, a FIFO queue coupled to the FC protocol unit, and inbound and outbound sequence managers that perform DMA transfers of inbound data and outbound data. *Id.* at 57–58 (citing Ex. 1005, 5, 7, 9, and Fig. 4).

Petitioner’s proposed combination of Bergsten, Hirai, and *Smith* relies on the same reasoning we found insufficient above with respect to the combination of Bergsten and Hirai. *See* Pet. 56–58. Petitioner does not contend that *Smith* cures the deficiencies in the combination that we identified above. *See id.* Accordingly, we determine that Petitioner has also failed to show by a preponderance of the evidence that claim 5 is obvious over Bergsten, Hirai, and *Smith*.

#### *G. Objective Indicia of Non-Obviousness*

Factual inquiries for an obviousness determination include secondary considerations based on evaluation and crediting of objective evidence of nonobviousness. *Graham v. John Deere Co.*, 383 U.S. 1, 17–18 (1966). Notwithstanding what the teachings of the prior art would have suggested to one of ordinary skill in the art at the time of the invention, the totality of the evidence submitted, including objective evidence of nonobviousness, may lead to a conclusion that the challenged claims would not have been obvious to one of ordinary skill in the art. *In re Piasecki*, 745 F.2d 1468, 1471–72 (Fed. Cir. 1984).

Secondary considerations may include any of the following: long-felt but unsolved needs, failure of others, unexpected results, commercial success, copying, licensing, and praise. *See Graham*, 383 U.S. at 17;

*Leapfrog Enters., Inc. v. Fisher-Price, Inc.*, 485 F.3d 1157, 1162 (Fed. Cir. 2007).

To be relevant, evidence of nonobviousness must be commensurate in scope with the claimed invention. *In re Huai-Hung Kao*, 639 F.3d 1057, 1068 (Fed. Cir. 2011) (citing *In re Tiffin*, 448 F.2d 791, 792 (CCPA 1971)); *In re Hiniker Co.*, 150 F.3d 1362, 1369 (Fed. Cir. 1998). In that regard, in order to be accorded substantial weight, there must be a nexus between the merits of the claimed invention and the evidence of secondary considerations. *In re GPAC Inc.*, 57 F.3d 1573, 1580 (Fed. Cir. 1995). “Nexus” is a legally and factually sufficient connection between the objective evidence and the claimed invention, such that the objective evidence should be considered in determining nonobviousness. *Demaco Corp. v. F. Von Langsdorff Licensing Ltd.*, 851 F.2d 1387, 1392 (Fed. Cir. 1988). The burden of producing evidence showing that there is a nexus lies with the patent owner. *Id.*; *Prometheus Labs, Inc. v. Roxane Labs, Inc.*, 805 F.3d 1092, 1101–02 (Fed. Cir. 2015).

*1. Long-Felt Need*

Patent Owner presents arguments regarding long-felt need in its Response. PO Resp. 54. Patent Owner’s evidence of long-felt need includes selected quotes from an article by an expert used by Petitioner in a co-pending lawsuit and citations to testimony by the same expert to the effect that “before Crossroads’ invention, there was no such thing as a storage router and that the term ‘storage router’ did not exist.” *Id.* at 55 (citing Ex. 2038, 14; Ex. 2029, 103:18–24, 104:15–105:1, 136:6–14).

“Establishing long-felt need requires objective evidence that an art-recognized problem existed in the art for a long period of time without

solution.” *Ex parte Jellá*, 90 USPQ2d 1009, 1019 (BPAI 2008) (precedential).

We have reviewed the cited testimony (Ex. 2029, 103:18–24, 104:15–105:1, 136:6–14), and we do not find it to demonstrate a long-felt need. The testimony is directed to whether the term “storage router” was used in the art in the late 1990s. *See, e.g., id.* at 104:24–105:1. It does not address what the needs or problems of the art were at that time. Thus, we do not find it supports Patent Owner’s contention.

The article cited by Patent Owner (Ex. 2038), which suggests that a problem might have existed in file system performance generally, nevertheless does not establish that there was long-felt need for the claimed invention. Patent Owner has proffered no evidence as to how long this problem had been recognized, the extent of the problem, whether it remained unresolved at the time of the invention, and whether the invention resolved this need. *See Perfect Web Techs., Inc. v. InfoUSA, Inc.*, 587 F.3d 1324, 1332–33 (Fed. Cir. 2009). As such, we find that Patent Owner has not shown adequately that there was any long-felt need.

## 2. *Commercial Success*

Patent Owner submits evidence of the number of products it has sold, revenue from those sales, and the relative sales of its various products as demonstrating the commercial success of the claimed invention. PO Resp. 55–57 (citing Ex. 2043; Ex. 2044). Petitioner argues that Patent Owner’s attempt to establish a nexus between the alleged secondary considerations and the claimed invention falls short. Reply 20–22.

Evidence of commercial success “is only significant if there is a nexus between the claimed invention and the commercial success.” *Ormco Corp.*

*v. Align Tech., Inc.*, 463 F.3d 1299, 1311–12 (Fed. Cir. 2006). To establish a proper nexus between a claimed invention and the commercial success of a product, a patent owner must offer “proof that the sales [of the allegedly successful product] were a direct result of the unique characteristics of the claimed invention—as opposed to other economic and commercial factors unrelated to the quality of the patented subject matter.” *In re Huang*, 100 F.3d 135, 140 (Fed. Cir. 1996).

As a threshold matter, Patent Owner has not established a nexus between its commercial product and the features of its claimed invention. Patent Owner’s technology includes many features besides those identified as allegedly non-obvious in the ’147 patent. Patent Owner has not shown that the items listed in its summary sheets embody the claimed invention, or that sales of the listed products resulted from the novel, non-obvious features of the claimed invention rather than other features. *See Ormco Corp.*, 463 F.3d at 1312–13 (evidence did not show that commercial success was due to claimed and novel features).

Even if Patent Owner had established a nexus between its marketed technology and the invention claimed in the patent, its commercial success argument would not be persuasive. Patent Owner’s declarant’s statements that certain products include “mapping” or “access controls” (Ex. 2043 ¶¶ 5–6) are insufficient to show commercial success of the claimed invention. An important component of the commercial success inquiry is determining market share associated with the alleged success, relative to all competing products. *In re Applied Materials, Inc.*, 692 F.3d 1289, 1300 (Fed. Cir. 2012). Even sales volume, if provided without market share information, is only weak evidence, if any, of commercial success. *Id.* at 1299. Here, the

fact that Patent Owner sold a certain number of these devices and that they made up a certain share of its sales is insufficient to establish commercial success without some context about the larger market. *See In re Baxter Travenol Labs.*, 952 F.2d 388, 391–392 (Fed. Cir. 1991).

### 3. *Licensing*

Patent Owner argues that “[a]s shown in Exhibit 2050, a large number of licensees have taken a license directed specifically to Crossroads’ ’972 patent family.” PO Resp. 57 (citing Ex. 2050). Patent Owner submits that “[t]he total license payments through FY2014 are over \$60 million” and that “[p]rominent members of the industry have paid millions of dollars to Crossroads in exchange for a license.” *Id.* Patent Owner concludes that because these companies were willing to pay millions of dollars to license the invention claimed in the ’972 patent family, the claims are not obvious. *Id.*

“While licenses can sometimes tilt in favor of validity in close cases, they cannot by themselves overcome a convincing case of invalidity without showing a clear nexus to the claimed invention.” *ABT Sys., LLC v. Emerson Elec. Co.*, 797 F.3d 1350, 1361–62 (Fed. Cir. 2015); *see also Iron Grip Barbell Co. v. USA Sports, Inc.*, 392 F.3d 1317, 1324 (Fed. Cir. 2004) (“Our cases specifically require affirmative evidence of nexus where the evidence of commercial success presented is a license, because it is often ‘cheaper to take licenses than to defend infringement suits.’”); *SIBIA Neurosciences, Inc. v. Cadus Pharm. Corp.*, 225 F.3d 1349, 1358 (Fed. Cir. 2000) (“[T]he mere existence of these licenses is insufficient to overcome the conclusion of obviousness, as based on the express teachings in the prior art that would have motivated one of ordinary skill to modify [other prior art].”).

Indeed, the mere existence of several licenses, without more specific information about the circumstances surrounding the licensing, is not a good indicator of nonobviousness. In *EWP Corp. v. Reliance Universal Inc.*, 755 F.2d 898, 907–08 (Fed. Cir. 1985), the Court of Appeals for the Federal Circuit stated that such licensing programs “are not infallible guides to patentability. They sometimes succeed because they are mutually beneficial to the licensed group or because of business judgments that it is cheaper to take licenses than to defend infringement suits, or for other reasons unrelated to the unobviousness of the licensed subject matter.”

Here, we lack sufficient information about the circumstances surrounding these licenses to be able to assess whether they truly weigh in favor of nonobviousness. Patent Owner directs us to no testimony from any licensee regarding why the licensee took a license from Patent Owner. It is unknown how much of the decision to take a license stems from a business cost-benefit analysis with regard to defending an infringement suit or from another business reason, rather than from acknowledged merits of the claimed invention. Patent Owner does not provide any information about how many entities refused to take a license, or why they refused.

In addition, as Patent Owner admits, these licenses are directed to an entire family of patents. Without more evidence, we are unable to determine whether the claimed subject matter of the ’147 patent was the motivator for taking the license. Given these circumstances, we determine that Patent Owner has failed to establish an adequate nexus between the claimed invention of the ’147 patent and the licenses. Thus, we do not find Patent Owner’s evidence of licensing weighs in favor of nonobviousness.

#### IV. PETITIONER'S MOTION TO EXCLUDE

We have reviewed Petitioner's Motion to Exclude (Paper 58), Patent Owner's Opposition to the Motion (Paper 63), and Petitioner's Reply in support of the Motion (Paper 69). Petitioner moves to exclude Exhibits 2300–2304, 2306–2323, 2035–36, 2043 ¶ 6, 2044, 2045, and 2050. Exhibit 2311, which is a chronology of events leading up to the filing of the '972 patent application, is fairly termed a demonstrative. It cites to Exhibits 2300–2304, 2306–2310, and 2312–2323. Even when we consider Exhibits 2300–2304, 2306–2310, and 2312–2323, or any portions of Exhibit 2311 that reference Exhibits 2300–2304, 2306–2310, and 2312–2323, we determine that they do not provide sufficient corroboration of reduction to practice. Similarly, even when we consider Exhibits 2035–36, 2043 ¶ 6, 2044, 2045, and 2050, we determine that they do not provide sufficient support for Patent Owner's objective indicia arguments. Accordingly, because we are in agreement with Petitioner's position on these issues for the reasons set forth above, even when considering the evidence that Petitioner seeks to exclude, Petitioner's Motion to Exclude is dismissed as moot as to these exhibits.

#### V. PATENT OWNER'S MOTION TO EXCLUDE

We have reviewed Patent Owner's Motion to Exclude (Paper 61, "PO Mot. to Exclude"), Petitioner's Opposition to the Motion (Paper 65, "Pet. Opp. Mot. to Exclude"), and Patent Owner's Reply in Support of the Motion (Paper 70). Patent Owner moves to exclude certain cross examination testimony of Dr. Levy and of Mr. Middleton, and Exhibits 1008, 1009, 1224, 1225, and 1226. PO Mot. to Exclude. We consider each in turn.

Patent Owner seeks to exclude certain cross examination testimony of Dr. Levy because “it was obtained pursuant to objectionable questioning and/or mischaracterizes his testimony.” PO Mot. to Exclude 1. Patent Owner seeks to exclude testimony of Mr. Middleton because Petitioner mischaracterizes his testimony “via selective citation.” PO Mot. to Exclude 7. Petitioner responds that these objections go to the weight that should be given the evidence, not its admissibility. Pet. Opp. Mot. to Exclude 2, 6. We agree with Petitioner. Regarding exhibits 1009, 1224, 1225, and 1226, we did not rely on either on the testimony to which Patent Owner objects or any of the exhibits identified in Patent Owner’s motion. Patent Owner also seeks to exclude Exhibit 1008 as having an improper certificate of translation. However, even considering Exhibit 1008, we find for Patent Owner on the asserted ground of unpatentability based on Hirai. Accordingly, for these reasons, we deny-in-part and dismiss-in-part as moot Patent Owner’s Motion to Exclude.

#### VI. PATENT OWNER’S MOTION TO SEAL

Patent Owner filed several exhibits (Exhibits 2044, 2045, 2050, and 2052) under seal, along with a motion to seal (Paper 27) and a protective order (Paper 28). We previously granted Patent Owner’s motion for entry of the default protective order. Paper 52. Patent Owner’s motion to seal is unopposed. Patent Owner’s motion to seal is *granted*.

There is an expectation that information will be made public where the information is identified in a final written decision, and that confidential information that is subject to a protective order ordinarily would become public 45 days after final judgment in a trial, unless a motion to expunge is granted. 37 C.F.R. § 42.56; Office Patent Trial Practice Guide, 77 Fed.

Reg. 48,756, 48,761 (Aug. 14, 2012). In rendering this Final Written Decision, it was not necessary to identify, nor discuss in detail, any confidential information. However, a party who is dissatisfied with this Final Written Decision may appeal the Decision pursuant to 35 U.S.C. § 141(c), and has 63 days after the date of this Decision to file a notice of appeal. 37 C.F.R. § 90.3(a). Thus, it remains necessary to maintain the record, as is, until resolution of an appeal, if any.

In view of the foregoing, the confidential documents filed in the instant proceeding will remain under seal, at least until the time period for filing a notice of appeal has expired or, if an appeal is taken, the appeal process has concluded. The record for the instant proceeding will be preserved in its entirety, and the confidential documents will not be expunged or made public, pending appeal. Notwithstanding 37 C.F.R. § 42.56 and the Office Patent Trial Practice Guide, neither a motion to expunge confidential documents nor a motion to maintain these documents under seal is necessary or authorized at this time. *See* 37 C.F.R. § 42.5(b).

Petitioner filed a number of documents (Exhibits 1217–1223) under seal without filing a corresponding motion to seal those documents. *See* 37 C.F.R. § 42.14. If a motion to seal is not filed within 20 days of this decision, those documents will be made public.

## VII. CONCLUSION

For the reasons expressed above, we determine that Petitioner has shown by a preponderance of the evidence that claims 1, 2, 4, 10, 11, and 13 are unpatentable as obvious over Kikuchi and Bergsten, and that claim 5 is unpatentable as obvious over Kikuchi, Bergsten, and Smith. The relatively weak secondary evidence of non-obviousness, diminished further by Patent

Owner's failure to show nexus to the claimed invention, is not sufficient to overcome the relatively strong evidence of obviousness presented by Petitioner. *See Ohio Willow Wood Co. v. Alps South, LLC*, 735 F.3d 1333, 1344 (Fed. Cir. 2013) (requisite nexus between secondary indicia and invention must be shown for evidence to be accorded substantial weight, and where a claimed invention represents no more than the predictable use of prior art elements according to established functions, evidence of secondary indicia is often inadequate to establish non-obviousness). Petitioner has *not* shown by a preponderance of the evidence that claims 1, 2, 4, 10, 11, and 13 are unpatentable as obvious over Bergsten and Hirai, or that claim 5 is unpatentable as obvious over Bergsten Hirai, and Smith.

#### VIII. ORDER

For the reasons given, it is:

ORDERED that claims 1, 2, 4, 5, 10, 11, and 13 of the '147 patent have been shown to be unpatentable;

FURTHER ORDERED that Petitioner's Motion to Exclude is *dismissed as moot*;

FURTHER ORDERED that Patent Owner's Motion to Exclude is *denied-in-part and dismissed-in-part as moot*;

FURTHER ORDERED that Patent Owner's Motion to Seal Exhibits 2044, 2045, 2050, and 2052 is *granted*;

FURTHER ORDERED that Exhibits 1217–1223 are to be unsealed within 20 days of this Final Written Decision, unless a motion to seal those exhibits is filed; and

FURTHER ORDERED that because this is a Final Written Decision, parties to the proceeding seeking judicial review of the Decision must comply with the notice and service requirements of 37 C.F.R. § 90.2.
